

ETHICAL PURCHASING POLICY

Bluevale Structures Ltd recognises its responsibility as a business and aims to set a high standard in relation to procurement of goods and services, taking account of both local and global social & environmental factors as well as financial considerations: purchasing and commissioning decisions will not be based on cost alone and it is recognised that procurement can have a significant effect on sustainable economic development, resource minimisation and social exploitation within the supply chain.

Consequently, our policy expects that suppliers of goods and services will have a similar policy in place, whether in writing or in practice and that all dealings throughout the supply chain are honest and fair.
